Notes for Reviewers of Scrivener for Windows

Scrivener is a powerful content-generation tool for writers that allows you to concentrate on composing and structuring long and difficult documents. While it gives you complete control of the formatting, its focus is on helping you get to the end of that awkward first draft. For a full overview of Scrivener's main features, please see the main Scrivener web page:

Getting Up and Running

The quickest way of getting up and running with Scrivener is to view our ten-minute introductory video, which can be found at the top of this page:

<http://www.literatureandlatte.com/video.php>

Other videos are also available on that page that cover a range of Scrivener's features. Please note that whilst these videos are mostly filmed using the Apple Mac version of Scrivener, they are still largely relevant but may contain features or functionality not yet available in Windows Scrivener. We are currently in the process of creating a specific Windows series of videos to assist users in getting the most out of Scrivener as swiftly as possible.

For a more in-depth guide, there is an interactive tutorial available from Scrivener's Help menu. The tutorial is itself a Scrivener project, so you use Scrivener as you go through it. It is very thorough, though, and takes a couple of hours to work through. Alternatively, the full manual is available as a PDF file from the Help menu and includes a QuickStart guide and an overview of Scrivener for Windows' features.

Templates and Sample Projects

Scrivener comes with some project templates (which can be selected from the template chooser that appears when you select File > New Project), including templates for novels, essays and screenplays. Several sample projects can also be downloaded from the following link:
